Summary

Full-Stack Developer and Product Lead who builds multi-tenant SaaS end to end: React and TypeScript frontends, REST and serverless APIs, PostgreSQL database design, AI integrations, workflow automation, performance optimization and QA. Writes clean code, delivers quickly and tests before release, so production holds no surprises.

Experience

Surgy Innovation Labs Dec 2025 – Present
Full-Stack Engineer | Product Lead *Bengaluru, India (Hybrid)*

- Built **SurgyCRM**, a multi-tenant hospital CRM in live use (**React, TypeScript, Tailwind, PostgreSQL**): lead capture, patient journeys, SLA ticketing, referrals and 15 audit-grade reports, backed by **370+ migrations** and **45+ serverless APIs**.
- Secured tenant and branch data with **PostgreSQL Row-Level Security**; found and closed cross-tenant access gaps, verifying each fix on throwaway databases before release.
- Built a **grounded RAG chatbot** (Gemini + embeddings) that answers from hospital data only, books appointments with deterministic code, and turns conversations into CRM leads; per-purpose **token budgets** keep AI costs capped.
- Automated lead-to-patient workflows: idempotent intake from **Meta Lead Ads webhooks**, website forms, chatbot and telephony; round-robin assignment; **WhatsApp** reminders; and post-treatment NPS surveys that open a ticket for low scores.
- **Optimized performance**: bulk imports batched from **about 30,000 to 35 requests** for 10,000 rows, mobile startup cut from 16 sequential calls to one parallel batch, and AI translations cached so each label is paid for once.
- Developed **SurgyField**, a Flutter (Android) field-sales app with GPS geofencing, offline queues with **idempotent batch sync**, and realtime updates on the shared backend.
- Ensured **QA without a QA team**: 55+ test files (Vitest, Deno, Flutter), **Node.js** CI jobs on GitHub Actions for data-integrity checks every 6 hours plus daily backups; production changes ship only through reviewed migrations.
- Lead development across SurgyCRM, **SurgyDischarge** and **SurgyLearn** (CV proctoring, **30–50%** fewer false positives): requirements, sprint planning, code review and releases.

Projects

Smart Sensor Tracking System — Node.js, Socket.IO, PostgreSQL, ESP32

- Real-time IoT telemetry pipeline (ESP32 MQTT, Mosquitto, **Node.js + Socket.IO**) streaming metrics every 5 seconds, with indexed time-series history in **PostgreSQL**.

Apartment Management System — Node.js, Express, MongoDB, React

- Full-stack app for **500+ tenant records** with role-based access, automated lease alerts and maintenance workflows; **40% faster queries** via MongoDB compound indexes and aggregation pipelines.

StreeCare — Python, Django REST, React, Scikit-learn

- Locality-safety classifier (**95% accuracy**) served through a **Django REST API** to a React dashboard.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), SQL (PL/pgSQL), Python, Dart, Java, HTML5, CSS3

Frontend & Mobile: React 18, Vite, Tailwind CSS, shadcn/ui, TanStack Query, React Hook Form + Zod, Flutter, PWA *(learning Next.js)*

Backend & APIs: Node.js, Express.js, Supabase (Postgres, Auth, Realtime, Storage), Deno Edge Functions, Django, FastAPI, REST, Webhooks

Databases: PostgreSQL (Row-Level Security, triggers, pg_cron), MongoDB, MySQL, Database Design

AI & Integrations: Gemini, Claude & OpenAI APIs, LLM, RAG with embeddings, Prompt Engineering, WhatsApp Business API, Meta Lead Ads

Testing & DevOps: Vitest, Deno test, Flutter test, GitHub Actions (CI/CD), Git, GCP, Postman, Cursor, Claude Code, Lovable

Education

JSS Academy of Technical Education Bengaluru, India
Bachelor of Engineering (B.E.) in Computer Science | CGPA: 8.3 *Jul 2025*

Certifications

Full Stack Developer — Unified Mentor (Nov 2024) | Web Development — Internshala (Nov 2024) | Machine Learning — Take It Smart (Dec 2022)
